

# FESTIVAL®

The High-Peak frame built for the event rental industry

## WHY FESTIVAL?

- Fewer parts translates to faster installations
- Less weight than competitive versions
- Versatility- widths available from 10' to 40'
- Engineered to ASCE 7-10 100mph
- The only expandable high-peak option

## PRODUCT OVERVIEW

The Festival® frame tent system epitomizes structural strength with simplicity of design. The high sweeping peaks and tensioned fabric make the Festival® a favorite for most any outdoor event. The key design principle behind the Festival® is the cross-cable mast support system, which allows for far less parts than other frame tents and reduces installation time.

The frame of the Festival® is built from structural grade aluminum extrusions that have been designed to provide engineered strength to the frame system

and allows the tent to withstand the rigors of the event rental industry. Our proprietary valance tensioning design and mid-span tensioning system keep the fabric uniformly tensioned and free of wrinkles without added complexity.

The Festival is the only high peak that is available in both one piece and expandable configurations.

## ENGINEERING

System engineered to ASCE 7-10 100mph (3 Second Gust) Exposure "C"
